Hyderabad inandavarshith@gmail.com +91 8125916712 LinkedIn GitHub

Education

Anurag University, Bachelor of Technology in Computer Science

Dec 2023 – Present

- Current: 3rd Year, 2nd Semester | CGPA: 9.0

Skills

Programming: Java (OOP, DSA), Python (Machine Learning), JavaScript (ES6+)

Web Development: HTML, CSS, React, Node.js, Express.js, REST APIs, JWT Authentication

Databases: MongoDB (NoSQL), SQL (Oracle)

Tools: Git, GitHub, Postman, VS Code

Projects

Plant Species Classifier (Deep Learning)

GitHub

- Built a high-accuracy image classification model using TensorFlow and EfficientNetB3, achieving 97% validation accuracy through transfer learning and advanced data augmentation techniques.
- Designed a robust training pipeline with fine-tuning, adaptive learning rate scheduling, and performance callbacks (EarlyStopping, ModelCheckpoint) to improve generalization and prevent overfitting.
- Deployed a Flask-based REST API for real-time predictions with top-3 confidence scores and integrated a web interface for seamless model interaction and testing.

UrbanPulse – Civic Issue Management Platform (MERN)

GitHub

- Built a full-stack civic issue platform enabling citizens to report geo-tagged issues with images, priority, and category, supporting real-time tracking across the issue lifecycle.
- Implemented secure JWT-based authentication with role-based access control (User/Worker/Admin) and designed REST APIs for issue management, notifications, and aggregated analytics.
- Developed role-specific dashboards with protected routing, notification system, and data-driven insights, streamlining issue resolution workflows and administrative operations.

CineTrack – AI Movie Watchlist System (Full Stack)

GitHub

- Developed a full-stack movie platform using React (Vite), Spring Boot, and MongoDB, enabling real-time watchlist tracking, search/filtering, and personalized user workflows.
- Engineered secure JWT-based authentication with bcrypt hashing and implemented scalable REST APIs for movies, reviews, and user-specific watchlist management (Planned/Watched/Dropped).
- Built an AI-powered assistant integrating LLaMA-3 (Groq) to convert natural language queries into structured filters and generate context-aware movie recommendations from the local dataset.

Experience

Landmine Soft | Frontend Developer Intern (Assignment-Based)

GitHub

- Redesigned and developed a responsive multi-page company website with modern UI/UX and professional branding.
- Conducted research on 15+ industry websites to design structured layouts, content flow, and effective CTAs.
- Built and deployed the application using React with reusable components and clean architecture.

Certifications

- Python for Data Science – IBM
- Data Analytics Essentials – Cisco
- Responsive Web Design – freeCodeCamp
